PROFESSIONAL SUMMARY

BCA graduate and enthusiastic Front-End Developer with a strong grasp of React.js, JavaScript, HTML5, and CSS3. Proven capability in building responsive, feature-rich web applications using modern CSS frameworks like Tailwind CSS and Bootstrap. Experienced in integrating REST APIs and creating interactive user interfaces. Passionate fresher ready to learn quickly in challenging environments and contribute to company growth.

TECHNICAL SKILLS

Core Languages: JavaScript (ES6+), HTML5, CSS3

Frontend Frameworks & Libraries: React JS, Hooks, State Management

CSS Frameworks & Tooling: Tailwind CSS, Bootstrap, Responsive Design

Developer Tools & Concepts: Git, GitHub, REST APIs Integration, LocalStorage (Web Storage API)

TECHNICAL PROJECTS

HeadLineHub – News Application *(React JS, Bootstrap, REST API)*

- Developed a dynamic news platform that fetches and displays top breaking headlines across multiple categories using a live News REST API.
- Implemented seamless content discovery features including an Infinite Scroll mechanism for continuous data loading and integrated an interactive automated top loading bar indicator synchronized with API fetch states.
- Engineered a responsive category-based navigation system using Bootstrap, allowing users to effortlessly filter news domains and automatically redirect to external source publications on click.

Noterix – Task Management Tool *(React JS, Tailwind CSS, LocalStorage)*

- Designed and engineered a persistent productivity application enabling streamlined CRUD tasks (Create, Read, Delete notes/tasks).
- Utilized client-side state management coupled with HTML5 LocalStorage to achieve explicit data persistence, ensuring zero data loss across page refreshes or full browser sessions.
- Architected a highly clean, modern, and completely responsive user interface leveraging utility-first workflows in Tailwind CSS.

LetterLab – Text Utility & Manipulation Suite *(React JS, Custom CSS, State Architecture)*

- Built an interactive text-processing workbench providing comprehensive text transformations: Uppercase/Lowercase conversions, deep white-space stripping (single/double space removals), instant clear, and a single-click native Clip-to-Clipboard functionality.
- Architected an advanced UI theme personalization engine utilizing integrated color palettes to dynamically update the application's background and font colors based on active user states.
- Programmed adaptive persistence that reliably preserves user-configured workspace palettes across window closures and re-opens, backed by an optimized default system theme state fallback.

EDUCATION

Bachelor of Computer Applications (BCA)

Saurashtra University / CU.SHAH College of commerce , management and computer education , Wadhwan
Graduation Completion Year: 2026
